Education & Awards

The University of British Columbia Vancouver, BC, Canada
Bachelor of Science in Computer Science (Expected Graduation: May 2027)

Euclid Mathematics Contest, University of Waterloo 2021
Top 5% Internationally, Certificate of Distinction

Experience

Software Developer Co-op | ***Apache Spark, Scala, Airflow,*** *Kafka, Linux* Jan. 2026 – Present
RBC Royal Bank *Vancouver, BC, Canada*

- Engineered secure **Scala** pipelines orchestrated by **Airflow DAGs** to process **50M+ daily transactions** from **Delta Lake**, enforcing strict **RBAC/encryption** controls on **petabyte-scale sensitive** financial data.
- Optimized **Spark** jobs by refactoring **SQL** queries and tuning **AQE/cluster memory**, solving resource bottlenecks and reducing **latency** by **40%**.
- Developing **multi-region** data pipelines with built-in **fault tolerance**, **idempotent** re-runs, and automated **failover** for critical banking workloads.
- Implementing job **monitoring** and **alerting** to track **SLAs** and ensure pipeline reliability, enabling rapid incident response for downstream teams.

Software Engineer Intern | ***React/Next.js, JavaScript, Tailwind CSS,*** *TypeScript* Jan. – Dec. 2025
Contello.ai *Toronto, ON, Canada*

- Led a major **UI redesign** of the content scheduling platform using **React/Next.js** and **Tailwind CSS**, improving user workflows and visual consistency across the app.
- Built **responsive dashboards** with **JavaScript** and modern **CSS** to visualize real-time queue health, campaign analytics, and multi-brand scheduling across thousands of posts/day.
- Implemented **reusable component library** with **Tailwind CSS** for consistent styling, reducing frontend development time and ensuring **design** cohesion.
- Raised reliability to 99.9% by layering **Playwright E2E** tests in CI, ensuring frontend regressions are caught before deployment.

Software Developer & Team Lead | *Unreal Engine, C++, Python* **Academic Project**
UBC Emerging Media Lab *Vancouver, BC, Canada*

- Led an AI-powered VR trainer in Unreal (C++) for the UBC School of Nursing, designing branching **UI**/state machines that mirror clinician decision trees.
- Stabilized sessions with a multithreaded supervisory layer (**C++/Python**) that monitors the AI patient, enforces protocol rules, and auto-corrects errant replies in real time.
- Delivered a functional prototype in two weeks with clinicians in the loop, securing project funding.

Projects

InsightUBC - Interactive Dashboard | ***React.js, JavaScript,*** *Chart.js, Node.js* **Academic Project**

- Built interactive **React** dashboards with **Chart.js** visualizations, enabling students to explore live enrollment data with filtering and real-time updates.
- Designed **reusable UI components** and responsive layouts to ensure consistent user experience across devices.
- Integrated **REST APIs** with caching strategies so **frontend** visualizations stayed in sync with backend data feeds.

SoloPilot — Client Ops Studio | ***Next.js, React,*** *TypeScript,* ***Tailwind CSS*** **Personal Project**

- Building a **Next.js/React** web app with **Tailwind CSS** that unifies client intake, planning, proposals, and delivery in one polished workspace.
- Shipped an email intake console with real-time thread management, inline annotations, and versioned PDF previews—all rendered client-side with **JavaScript**.
- Implemented responsive layouts and **component-driven architecture** for consistent styling and fast iteration.

Technical Skills

Languages: **JavaScript/TypeScript**, HTML/CSS, Python, Java, SQL, C/C++
Frontend: **React/Next.js**, **Vue.js**, **Tailwind CSS**, Chart.js, responsive design, component libraries, state management
Tools & Platforms: Node.js/Express, Playwright, Git, Docker, AWS (Amplify, S3, CloudWatch), REST APIs, CI/CD
