EDUCATION & AWARDS

University of British Columbia

Vancouver, BC, Canada

Bachelor of Science in Computer Science (Expected Graduation: May 2027)

Euclid Mathematics Contest, University of Waterloo, Top 5% Internationally

2021

WORK EXPERIENCE

Shopify | *Ruby/Rails, GraphQL, Shell, Nix*

Sept. 2026 – Present

Software Engineer Intern

Toronto, ON, Canada

- Fixed a **merchant trust-eligibility bug** in WhatsApp recommendations; added regression tests and merged a targeted fix without broadening shared eligibility logic.
- Built a **Codex integration used across several teams**, handling isolated plugin caches and shared-worktree rules files with symlink checks, shell linting, and tests.

RBC Royal Bank | *Python, Scala, Kafka, Airflow, Docker, Linux*

Jan. – Aug. 2026

Software Developer Co-op

Vancouver, BC, Canada

- Engineered Python/Scala **data pipelines** ingesting **50M+ daily events** via Kafka streams and Airflow DAGs, enforcing RBAC/encryption on **petabyte-scale Delta Lake**.
- Optimized **Spark** jobs to cut **test runtime 40%**; rolled back the change after production instability.
- Worked on multi-region services on **Kubernetes**-orchestrated, Docker-containerized clusters with fault tolerance, idempotent re-runs, and **Terraform**-provisioned failover for high-reliability workloads.

Contello.ai | *Python, TypeScript/Node.js, AWS, Docker*

Jan. – Dec. 2025

Software Engineer Intern

Toronto, ON, Canada

- Built async **Python** data pipelines on **AWS** (SQS, S3, VPC) processing **thousands of jobs/day**, designing queue topologies with dead-letter routing and back-pressure controls.
- Authored **automated test** suites (E2E + integration) across Docker-containerized stacks, gating all merges and deploys through CI/CD with confidence.
- Raised service reliability to **99.9%** via retry/backoff, **Elasticsearch**-indexed logs, CloudWatch monitoring/alerting, and structured observability across networked services.

RESEARCH EXPERIENCE

UBC Emerging Media Lab | *C++, Python, Unreal Engine*

Sept. – Dec. 2024

Software Developer & Team Lead

Vancouver, BC, Canada

- Led a C++ VR simulation project with an **edge-to-cloud pipeline** streaming sensor events for AI decision-making.
- Built **C++/Python supervision** with shared state, lock-free messaging, and real-time monitoring; profiled memory/I/O hotspots to cut **latency 40%** and **costs 90%**.

PROJECTS

Backer | *Go, Python, AWS (DynamoDB, S3), XGBoost*

Hack The Coast 2026

- Designed a **DynamoDB**-backed data layer (10+ tables) with batch operations, transactional writes, and typed repository abstractions supporting high-throughput workflows.
- Built a **Go** data ingestion service processing DynamoDB event streams; engineered features and trained an XGBoost ranking model scoring entities on 6 signals.
- Integrated S3 storage, async notifications, and middleware with role-based access control.

Workbase | *TypeScript, PostgreSQL, AWS Bedrock, Vitest*

Personal Project

- Built a career content platform that ingests GitHub repositories via OAuth, normalizes commit and PR data into **PostgreSQL**, and generates verified resume highlights with evidence attribution.
- Designed a multi-step **data pipeline** with LLM generation, schema validation, output repair, and audit logging, plus deterministic retry and automated correctness tests.

SKILLS

Languages: C/C++, Python, Go, Scala, Java, SQL, TypeScript/JavaScript

Infrastructure: Kubernetes, Docker, Terraform, Kafka, Airflow, Apache Spark, AWS (S3, SQS, Lambda, DynamoDB, CloudWatch); Linux, Git, CI/CD

Databases & Storage: PostgreSQL, DynamoDB, Elasticsearch, Redis, Delta Lake; REST APIs, Flask/FastAPI
