Available for Co-ops/Internships (Open to Relocation): May–Dec 2026 | Full-time: May 2027+

EDUCATION & AWARDS

University of British Columbia <i>Bachelor of Science in Computer Science (Expected Graduation: May 2027)</i>	Vancouver, BC, Canada
Euclid Mathematics Contest, University of Waterloo <i>Top 5% Internationally, Certificate of Distinction</i>	2021

WORK EXPERIENCE

Software Developer Co-op <i>Java/Scala, Apache Spark, Airflow, Cloud, Linux</i> <i>RBC Royal Bank</i>	Jan. 2026 – Present Vancouver, BC, Canada
- Developed cloud-hosted Java/Scala services processing 50M+ daily transactions, collaborating in Agile sprints with code reviews and CI-gated releases on enterprise-scale financial systems. - Optimized Spark jobs by migrating legacy code to Spark-native APIs and tuning AQE/cluster memory, solving resource bottlenecks and reducing latency by 40%. - Shipping multi-region cloud services with built-in fault tolerance and automated failover, following agile practices with sprint planning, retros, and cross-team collaboration.	
Software Engineer Intern <i>JavaScript/TypeScript, Node.js, AWS, Playwright</i> <i>Contello.ai</i>	Jan. – Dec. 2025 Toronto, ON, Canada
- Owned end-to-end feature delivery in JavaScript/TypeScript: shipped scheduling UX, multi-brand management, and media publishing using Node.js backends and HTML/CSS frontends on AWS at thousands/day scale. - Accelerated content prep by ingesting brand docs with an NLP step, caching embeddings, and auto-injecting channel-specific context while enforcing API guardrails. - Raised reliability to 99.9% by writing automated E2E tests (Playwright) and integration test suites in CI/CD, strengthening auth/session flows, and adding CloudWatch alerting with retry/backoff.	

RESEARCH EXPERIENCE

Software Developer & Team Lead <i>Unreal Engine, C++, Python</i> <i>UBC Emerging Media Lab</i>	Sept. – Dec. 2024 Vancouver, BC, Canada
- Led development of an AI-driven VR clinical simulation in Unreal (C++), collaborating with UBC's School of Nursing to train nurse practitioners. - Designed a novel multithreaded supervisory architecture (C++/Python) that monitors AI patient behavior and enforces clinical protocol adherence. - Evaluated system performance, achieving 40% latency reduction and 90% inference cost savings through pipeline optimizations.	

PROJECTS

Backer <i>JavaScript/TypeScript, Next.js, AWS (DynamoDB, S3, SES), NextAuth</i>	Hack The Coast 2026
- Built a full-stack JavaScript/TypeScript platform; architected a DynamoDB-backed cloud data layer (10+ tables) with transactional writes powering feed, messaging, and investment workflows. - Designed 12+ API route groups with NextAuth middleware, role-based route guards, and S3/SES integrations on AWS cloud infrastructure.	
SoloPilot <i>Python, TypeScript/Next.js, AWS, LangChain</i>	Personal Project
- Shipped an end-to-end freelancer workspace (intake, planning, proposals, delivery) with AWS and CI gates. - Built a user-facing email intake console that triages threads, captures scope, and renders versioned proposal PDFs via a Vision Model. - Designed a Python evaluator→revisor agent loop with rubric-based benchmarking for measured quality improvements.	

SKILLS

Languages: Java, JavaScript/TypeScript, Python, HTML/CSS, SQL, Scala, C/C++
Platforms & Tools: AWS, Next.js/React, Node.js, Playwright, Flask, Docker, Git, Apache Spark, RDBMS
