Available for Co-ops/Internships (Open to Relocation): May-Dec 2026 | Full-time: May 2027+

EDUCATION & AWARDS

The University of British Columbia <i>Bachelor of Science in Computer Science (Expected Graduation: May 2027)</i>	Vancouver, BC, Canada
Euclid Mathematics Contest, University of Waterloo <i>Top 5% Internationally, Certificate of Distinction</i>	2021

WORK EXPERIENCE

Software Developer Co-op <i>Python, Java/Scala, Airflow, Docker, Linux</i> <i>RBC Royal Bank</i>	Jan. 2026 – Present Vancouver, BC, Canada
- Developed cloud-hosted Python/Java services processing 50M+ daily transactions on petabyte-scale Delta Lake with CI-gated releases and code reviews. - Optimized Spark batch jobs via Spark-native API migration and AQE/cluster-memory tuning, cutting latency by 40%; built cost/performance dashboards driving infrastructure decisions. - Shipping multi-region services with fault tolerance, idempotent re-runs, and automated failover for high-reliability banking workloads across distributed infrastructure.	
Software Engineer Intern <i>TypeScript/Node.js, AWS, Docker</i> <i>Contello.ai</i>	Jan. – Dec. 2025 Toronto, ON, Canada
- Built Playwright E2E and integration test frameworks across Dockerized service stacks (Node + DB), gating all releases through CI/CD pipelines and catching regressions pre-deploy. - Owned end-to-end feature delivery: shipped scheduling, multi-brand management, and async video publishing backed by distributed pipelines on AWS (SQS/S3) at thousands/day scale. - Raised service reliability to 99.9% via retry/backoff, CloudWatch monitoring/alerting, and hardened auth/session across Docker-containerized deployments.	

RESEARCH EXPERIENCE

Software Developer & Team Lead <i>Unreal Engine, C++, Python</i> <i>UBC Emerging Media Lab</i>	Sept. – Dec. 2024 Vancouver, BC, Canada
- Led development of an AI-driven VR clinical simulation in Unreal (C++), collaborating with UBC's School of Nursing to train nurse practitioners. - Designed a novel multithreaded supervisory architecture (C++/Python) that monitors AI patient behavior and enforces clinical protocol adherence. - Evaluated system performance, achieving 40% latency reduction and 90% cost savings through pipeline optimizations.	

PROJECTS

Backer <i>TypeScript/Next.js, AWS (DynamoDB, S3, SES), NextAuth</i>	Hack The Coast 2026
- Architected a multi-tenant platform on DynamoDB (10+ tables) with typed repository abstractions and transactional writes serving an investor feed, messaging, and investment subsystems. - Built NextAuth middleware with role-based route guards and a 12+ route API surface spanning auth, feed, investments, uploads, and messaging.	
Workbase <i>TypeScript/Next.js, Prisma/PostgreSQL, Vitest</i>	Personal Project
- Built a full-stack platform with Prisma/PostgreSQL data layer, REST API routes, and GitHub OAuth service integration. - Wrote Vitest test suites covering domain logic (status transitions, eligibility, deduplication) and structured LLM client (parsing, repair, validation).	

TECHNICAL SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, C/C++, Go, HTML/CSS
Infrastructure & Data: Apache Spark, Docker, AWS (Lambda, DynamoDB, S3, SQS, CloudWatch), PostgreSQL, Delta Lake, Airflow
Testing & DevOps: Playwright, Vitest, Jenkins, Jest, CI/CD, Git, REST APIs, Linux
